

What can you expect as a Patient and as a Referring Physician?

As a patient, you can expect an individualized treatment plan that includes the safest and least invasive treatment options made available through the latest technological advancements proven effective in acute and chronic pain.

As a referring physician, you can expect a reliable partner to work with you in diagnosing and providing therapeutic options for patients dealing with pain so that they can be more active.

Why is Comprehensive Care the Best Treatment Approach?

Through an interdisciplinary approach to pain management, we provide comprehensive evaluation of our patients, factoring in physical, functional, emotional, and psychological needs. The medical team at **Michigan Pain Management Consultants** consists of board-certified pain management physicians, nurse practitioners, registered nurses, x-ray technicians, and medical assistants. All members work together to formulate and implement a comprehensive treatment plan to reduce pain and improve function.

GOALS OF TREATMENT INCLUDE

- Improving the patient's quality of life and function
- Having all needs of a patient with pain treated in one location by many different professionals
- Developing a coordinated, individualized treatment plan
- Reducing suffering for the patient and family
- Increasing activity levels of the pain patient with an active rehabilitation program
- Decreasing depression, anxiety, and irritability
- Helping the patient learn to control the pain rather than the pain controlling them
- Reducing the cost of medical care by reducing hospitalizations and emergency room care

Reducing Pain, Restoring Function, and Improving Self-image for Patients in Michigan
